Innovative Omnichannel Solution for In-Store Guest Experience Transformation

1 Concept Name

FitFinder & Endless Aisle Kiosk

2 Problem Statement

Customers frequently experience friction in physical stores when specific sizes, colors, or styles are out of stock, leading to missed sales and customer frustration. Additionally, shoppers often feel uncertain about how alternative styles or out-of-stock items will look on them without an available fitting room sample, causing them to abandon the purchase entirely rather than ordering online.

3 Proposed Digital Experience

An integrated **Smart In-Store Digital Kiosk & AR Virtual Fitting Mirror** paired with the brand's mobile app. It allows customers to browse the complete online warehouse catalog (Endless Aisle), visualize out-of-stock garments using Augmented Reality (AR) try-on mirrors, and order items for seamless home delivery or same-day local pickup directly from the store floor.

4 How It Works

- **Discovery:** A customer cannot find their size on the physical rack and walks up to the interactive in-store kiosk or scans a rack QR code with the brand's mobile app.
- **Scan & Browse:** The customer scans the barcode of the desired item to view real-time inventory across all nearby stores and central warehouses.
- **Virtual Try-On:** Using the kiosk's AR mirror or their smartphone camera, the customer previews the missing colorway or size mapped realistically onto their body.
- **Checkout & Fulfillment:** The customer completes payment via contactless mobile checkout, selects free home delivery or click-and-collect, and receives an instant digital tracking receipt.

5 Value to the Customer

- **Convenience:** Eliminates wasted store visits by bridging in-store browsing with full online inventory access.
- **Confidence & Personalization:** AR visualization reduces fit uncertainty and recommends coordinating pieces based on the scanned item.
- **Speed:** Allows shoppers to bypass traditional checkout lines using instant digital self-service.

6 Value to the Business

- **Revenue Recovery:** Captures sales that would otherwise be lost to out-of-stock sizes or colors.
- **Increased Basket Size:** AI-powered cross-sell recommendations prompt customers to add matching accessories or apparel.
- **Staff Efficiency:** Frees up floor associates from routine inventory searches, allowing them to focus on high-touch styling and service.

7 Key Features

- **Endless Aisle Catalog:** Real-time stock synchronization across retail locations and central fulfillment hubs.
- **AR Virtual Mirror:** High-definition 3D garment mapping for instant virtual try-on.
- **Cross-Sell Styling Engine:** Algorithm-driven "Complete the Look" product recommendations.
- **One-Touch Mobile Self-Checkout:** Fast digital payments (Apple Pay, Google Pay, Cards) directly at the terminal.

8 Potential Challenges

- **Initial Hardware & Setup Costs:** Expense associated with deploying interactive kiosks and AR mirrors across all retail branches.
- **Inventory Sync Latency:** Requires low-latency integration between physical store ERP systems and e-commerce warehouses to avoid accidental backorders.
- **Customer Adoption:** Some non-digital-native shoppers may need light onboarding or staff assistance during their first interaction.
